XLPE Insulated Power Cable

I . Brief of XLPE Insulated Power Cable

XLPE insulated power cable has a number of advantages over paper insulated and PVC insulated cable. XLPE cable has high electric strength, mechanical strength, high-ageing resistance, environmental stress resisting anti-chemical corrosion, and it is simple construction, using convenient and higher operating of long term temperature. It can be laid with no drop restriction.

Various of flame-retardant and non-flame retardant XLPE cable can be manufactured with three technology (peroxide, silence, and irradiation, cross linking). The flame-retardant cable covers all kinds of low-smoke, low-halogen, low-smoke halogen free and non-smoke no halogenated and three classes of A, B, C.

Our XLPE cable can be manufactured according to company's specification which is equivalent to IEC60502, IEC60332, IEC60754. Some of indexes are superior to above international standard IEC.

Some of special XLPE cable can be manufactured according to the other standards required by customs.

XLPE cable having higher long-term working temperature and greater current rating, ar the same environment XLPE cable may be reduced size (nominal cross section) 1 or 2 class in comparison with paper and PVC cable. These are not only improving the quality and properties of products, but also reduce cable's production costs.

* “ZR-” covers three classes A, B, C of flame-retardant cable. It can be expressed as “ZRA-”, or “ZRB-” or “ZRC-” separately. For example: “ZRB-YJV” or “ZRA-YJV22” .

** Only technical data of common cable are listed in Table of Cable's construction, weight and electrical properties.

Attached Table: Cross section area of neutral conductor in 3+1cores, 4+1cores and 3+2 cores should conform to specification of following table:

B. Voltage Test Each drum of finished cable should withstand power frequency voltage 3.5KV for 5 minutes, the insulation is not breakdown.

C. Test on bunched Cable Under fire conditions

1. Category of Sample

The number of cable lengths required to give a total volume of combustible material per meter of :

Category a:7 Liters

Category b:3.5 Liters

Category c:1.5 Liters

2. Duration of application of the flame

In the case of cables samples in Category A and B the test flame should be applied for 40 min.

Cable samples in Category C should have the test flame applied for 20 min.

3. Evaluation

After burning has ceased, the charred portion of cable should not have reached a height exceeding 2.5m.

V. Service conditions and Parameters of Cable

The cable is applied to fixed installation for rated voltage 0.6/1KV of power transportation and distribution line.

Max. Rated Temperature of conductor: Nominal Operating 90℃.

Short circuit: (Max.for 5 sec.) 250℃

Temperature of laying, in air 25℃

Underground 15℃

For laying, single core, triangle laying for three cables.

Depth of laying in direct:100cm

Coefficient of thermal resistivity of soil 100℃.cm/w

The cable can be laid without drop restriction, and the environment temperature shall not be lower than 0℃.

Single core, steel tape armoured cable should be only aplied to direct-circuit line.

For nominal insulation thickness, size of armour, over-diameter, weight and current rating of retardantflame cable of class A,B,C, you should refer to the value of general cable.
